Christ Community Health is recognized by the National Committee for Quality Assurance as a Patient Centered Medical Home or PCMH. Christ Community Health strives to deliver outstanding care to all of its patients by promoting and cultivating a partnership between the patient, health care provider, and health care team. Some of the services provided at Christ Community Health include physical exams, immunizations, behavioral health care, chronic disease management, nutrition and diabetes education, HIV disease management, referrals for specialty care, dental care, same-day sick visits, and pediatric care.

We do this by coordinating evidence-based, comprehensive, and continuous health care as well as being accessible to you and your family with the development of "care teams." Our goal is to ensure your medical needs are met in the area of preventative, acute, and chronic healthcare. Your care team will also place an emphasis on timely and efficient service to you and your family in order for Christ Community Health to be your medical home.

As a patient, we ask several things from you: Be an active participant in your health care, and assume responsibility for all aspects of your care. Be prepared for appointments, bringing a list of medications and questions you may have. Follow the "Care Plan" your primary care provider has developed for you with the care team. Call Christ Community Health before you go to the emergency room for non-emergent needs. Work with your health care team and your family for self-management of your care when not with your primary care doctor.

Now is the time to start a relationship with your own primary care provider. At Christ Community Health, we treat the whole person—mind, heart, spirit, and body. We are committed to sharing the love of Christ through the care we provide.

Sincerely,
The Staff of Christ Community Health Services Augusta
